

**Desktop Resolution Settings:**

- Features of the App were tested and ran on a Windows Desktop with a resolution of 1920x1080, using a different resolution may affect the output of data being displayed in the output area due to me adding headers to make the products and customers detail in a readable format.

**Instructions:**

1. To enter admin menu (1, admin, admin1)
  - a. Option 1 Selected, to login as admin, username: admin, pw: admin1
    - i. When referring to any user\_id on the database, "u\_" does not need to be used, anytime it refers to input user\_id, only the digits are used to refer to users, this applies to order\_id as well, only digits are needed to be enter
    - ii. To generate test data, simply select option 5, and wait until it says the generated data is successful as it takes time for the data to be generated
    - iii. Same thing applies to generating statistical figures
  - b. Option 2 Selected, registering, it follows all the validation of the assessments, for example:
    - i. name should only contain letters or underscores, and its length should be at least 5 characters.
    - ii. password should contain at least one letter (this letter can be either uppercase or lowercase) and one number. The length of the password must be greater than or equal to 5 characters.
    - iii. Email must contain an @ symbol
    - iv. Mobile number should start with 04 or 03, and only contain 10 numbers
2. To get into the customer menu, simply either register at the login menu or add a customer on the admin menu for example, when creating the customer account, you may use, testing\_j as the username, password can be testing1234, email can be [testing@monash.edu](mailto:testing@monash.edu), mobile number can be 0412345678, and once it is registered, you can login using those details.
